

Integre Technologies Announces Partnership with Test Spectrum

Integre Technologies, a leading provider of ASIC design and verification services, today announced their partnership with Test Spectrum Inc., an industry expert in semiconductor test solutions. Together Integre and Test Spectrum provide to semiconductor customers services along the entire ASIC development cycle, from requirements to production silicon.

Rochester, NY (PRWeb) February 13, 2007 -- Integre Technologies, a leading provider of ASIC design and verification services, today announced their partnership with Test Spectrum Inc., an industry expert in semiconductor test solutions.

Test Spectrum is an engineering firm focused on the development of test solutions for the semiconductor industry, and is able to develop and manage test requirements from design hand-off through initial production release, and throughout the entire product life cycle. Each project is thoroughly reviewed and developed with the customer's best interests in mind, an important aspect when considering a test development partner.

"Our customers are increasingly asking Integre to manage the entire ASIC development cycle, from requirements to production silicon. We have worked with Test Spectrum for several years now and found they are not only experts in semiconductor testing but accustomed to working with a broad range of projects and technologies. Like Integre, Test Spectrum has experience with digital, mixed-signal, and RF semiconductors, each of which bring their own unique set of test requirements" said Mark Blejwas, Integre Managing Partner.

"Test Spectrum is focused on providing solutions that enable the progression of new semiconductor designs into manufacturable products" stated Todd Turner, President of Test Spectrum. "Together our companies provide one of the most experienced semiconductor service teams in the industry, from concept and design, through test and production."

About Integre

Integre Technologies is a design services company providing full turn-key and project augmentation support in the ASIC and electronic system design disciplines. Integre's capabilities include: FPGA and ASIC design and verification including multi-million gate SOC's, Analog/RF ASIC Design, Mixed Signal ASIC Design and Circuit Board Design. Integre is headquartered in Rochester, New York. For more information on Integre please visit our web site at www.integretek.com.

About Test Spectrum

Test Spectrum Inc. serves the semiconductor industry by developing test software and hardware solutions for integrated circuits. Test Spectrum specializes in RF, mixed-signal and high-end digital test solutions. The company also provides turnkey test hardware including design, fabrication and assembly of loadboards, DUT cards, and probe cards. Test Spectrum is headquartered in Austin, TX and supports customers worldwide. For more information on Test Spectrum please visit their website at www.testspectrum.com.
